```
The invention relates to a novel nucleic acid molecule expressed in liver or stomach tissue, useful for diagnosing or treating obesity, anorexia etc. The nucleic acid molecule is useful as a diagnostic and therapeutic agent or as a target for agents which act as modulators and/or monitors of physiological processes associated with obesity, anorexia, weight maintenance, impaired muscle development, diabetes and/or metabolic energy levels and/or other physiological conditions. Alkylguanine alkyltransferase (AGT)-110, AGT-110, AGT-107, AGT-107, AGT-116, AGT-115 and/or AGT-108 genes of the invention and the agent that modulate their expression or activity are useful in manufacturing a medicament for treating a condition characterised by obesity, anorexia, diabetes and/or energy imbalance. The invention is useful in gene therapy. The present sequence is human AGT-114 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Leber's hereditary optic neuropathy. LHON, mitochondrial encephalopathy lactic acidosis and stroke, MELAS; mycolonic epilepsy ragged red fibre syndrome, MERRF; cancer; neuroprotective, nootropic; antidabetic; anticonvulsant; antiarthritic; osteopathic; ophthalmological; cycostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying a mitochondrial target for drug screening assays and for treating diseases associated with altered mitochondrial function, comprises detecting a modified polypeptide in a sample and correlating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human heat mitochondrial protein as a therapeutic target SeqID2509

This invention relates to novel mitochondrial targets that can be used for thereapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy compositions have neuroprotective, nootropic, antidiabetic, attianthibit, osteopathic, ophthalmological and stroke distributions in this polypeptide sequence is a human heart
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antisense; prokaryotic essential gene; cell proliferation; drug design.

chippeptide; (5) producing the polypeptide; (6) inhibiting cellular polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of agene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway of the gene product or that has an activity against a biological pathway of agene product or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent of which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for den discourse proliferation of an organism or screening for homologous mucleic acids required for cellular proliferation to for a solutional confidence in a compound that inhibits the description of a confidence or a confidence or collection of a confidence or collection or description of a confidence or collection or description of a confidence or collection of a confidence or collection or description or description or description or description or description or description or descr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the printed for the printed for the printed for the printed for the printed patent for the printed patent for the printed patent for the printed patent for the printed format directly from WIPO at the printed for the pr

The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA ABB72072). The sequence data for this patent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This represents a human GPR38 variant (GPR38V) polypeptide. GPR38V can be expressed by standard recombinant methodology. The polynucleotides and polypeptides are used in the treatment of bacterial, fungal, protozoal and viral infections, infections caused by HIV-1 or HIV-2, pain, cancers, diabetes, obesity, anorexia, asthma, Parkinson's disease, acute heart failure, hypertension, urinary retentions, osteoporosis, allergies, ulcers, migraine, psychotic and neurological disorders, or dyskinesias. They are also useful for identifying agonists and antagonists that are potentially useful in therapy, as vaccines to induce immunological response in a mammal. The polypeptides may also be used as immunogens to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New human GPR38V polypeptide and polynucleotide, useful for treating e.g. bacterial, fungal, protozoal and viral infections, cancers or allergies, as vaccines, and for identifying agonists and antagonists potentially

The present invention relates to novel human NOV proteins and their coding sequences (ACC72075-ACC72181 and ABRS8465.4 ABRS8469). The NOV proteins are useful in manufacturing a medicament for treating a syndrome associated with a human disease. The NOV proteins and coding sequences may be used to diagnose, treat or prevent metabolic disorders such as diabetes or obesity, infections, cachexia, cancer, neurodegenerative disorders such as Alzheimer's disease or Parkinson's disease, immune

                                                                                                                                                                                                                                                                                                                                                                                0
              altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRF) or cancer. Accordingly, these ompositions have neuroporotective, nootropic, antidiabetic, antidiath, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a compound comprising a binding moiety which selectively binds to a protein or polypeptide listed in the specification (e.g. human autotaxin polypeptide or human CD24 signal transducer polypeptide), and a further moiety. The compound is useful in medicine or in the treatment, imaging, diagnosis or prognosis of mantle cell diagnostic or prognostic agent for MCL, or an agent for treating MCL, a diagnostic or prognostic agent for MCL, or an agent for imaging MCL cells in the body of an individual. This sequence corresponds to one of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New compound for treating, imaging, diagnosing or prognosing mantle cell lymphoma, comprises a binding moiety (e.g. antibody) that binds to a protein (e.g. human autotaxin polypeptide), and a further moiety (e.g. nucleic acid).
                                                                                                                                                                              cytostatic, gene therapy, binding moiety; medicine; imaging; diagnosis; prognosis; mantle cell lymphoma; cancer.

The present invention relates to novel human NOV proteins and their coding sequences (ACC72075-ACC72181 and ABRS8363-ABRS8469). The NOV proteins are useful in manufacturing a medicament for treating a syndrome associated with a human disease. The NOV proteins and coding sequences may be used to diagnose, treat or prevent metabolic disorders such as diabetes or obesity, infections, candexia, cancer, neurodegenerative disorders such as Alzheimer's disease or Parkinson's disease, immune disorders, haematopoietic disorders and various dyslipidaemias
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                        The present invention relates to novel human NOV proteins and their coding sequences (ACC72015-ACC72181 and ABRS8363-ABRS8469). The NOV proteins are useful in manufacturing a medicament for treating a syndrome associated with a human disease. The NOV proteins and coding sequences may be used to diagnose, treat or prevent metabolic disorders such as diabetes or obesity, infections, canceri, neurodegenerative disorders such as Alzheimer's disease or Parkinson's disease, immune disorders, haematopoietic disorders and various dyslipidaemias
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Wang D;

encoded polypeptides (AAM3864-AAMA2213) with nootropic, encoded polypeptides (AAM3864-AAMA2213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and contral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as alzheimer's, parkinson's disease, Huntington's disease, amyotrophic clateral sclerosis, and Shy-Drager Syndrome. Other uses include the cutilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis as: Immune system suppression, and thrombolytic activity, arthritis and inflammation, leukaemias and construction of the printed specification data for this patent did not form the part of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               gene or
Novel nucleic acids and polypeptides, useful for treating disorders such as central nervous system injuries.
                                                                                                                                                                                                  The invention relates to human nucleic acids (AAI57798-AAI61369) and the

The invention relates to identifying a compound comprising exposing cell expressing gene I having enhancing or suppression effect on an APPL-SV phenotype (a transgenic fruit fly expression effect on an APPL-SV protein, APP, as a fusion protein with the suppression of hairless protein, APP, as a fusion protein with the suppressor of hairless cranscription factor, Su(H) and VPIG activation domain. The fusion protein is cleaved by gamma secretase (encoded by the Psn gene) to protein is cleaved by gamma secretase (encoded by the Psn gene) to protein is cleaved by gamma secretase (encoded by the Psn gene) to clease the Su(H-VPIG, which affects wing vein development. Genes affecting PP processing the APPS SV line with an EP P-element insertion library, and the DNA recovered from the appropriate EP strain and sequenced) chosen from AD000864, Debing the indentified fruit fly genes affecting APP processing and their mammalian homologues, identifying modulation of Alzhaimer's disease (AD) symptoms of AD and an agent that cocell in absence of agent. Also included are regulating AD (involves providing a subject with AD or symptoms of AD and an agent that changes the expression or protein expression vector comprising the subject with the agent) and composition (comprising a nucleic acid encoding a polypeptide or an expression vector comprising the subject with AD, or regulation of gene expression or protein function of gene or protein associated with AD, or regulation of gene expression or protein associated with AD, or regulation of gene expression or protein associated with AD, or regulation of gene expression or protein associated with AD, or regulation of gene expression or protein associated with AD, or regulation of gene expression or protein associated with AD, or regulation of gene expression or protein associated with AD, or regulation of gene expression or protein associated with AD, or regulation of gene expression and active and an antibody that specifically binds to the having increased susceptibility to AD or 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .

The present sequence is that of novel secreted protein SECP1, which is predicted to localise in the plasma membrane. The protein shows homology to the detected to localise in the plasma membrane. The protein shows homology to the SECP1 cDNA were detected in endothelial cells, pancreas, adipose, adrenal gland, chyroid, mammary gland, myometrium, uterus, placenta, prostate, testis, and in neoplastic cells derived from ovarian carcinoma, breast carcinoma, prostate carcinoma (bone metastases) and melanoma. SECP1 was also highly expressed in a small cell lung cancer, a large cell lung cancer, and a non-small cell lung cancer, and wey be useful as a target for the consmall cell lung cancer. The predicted SECP1 protein showed homology to human XIAA0960. The invention provides 9 novel SECP secreted proteins (see AAB20155-63), nucleic acids encoding them (see AAF30188-96).

Cationical and to identify agents that modulate the expression or activity of SECP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0;
                                                                                                                                                                                       New polypeptide designated SECP, its encoding nucleic acid and its immunospecific antibody, useful for diagnosing, preventing and treating SECP-associated disorders such as cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Allaheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chrombolytic; drug screening; arthritis; inflammation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM8642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymucleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic

coding sequences (ACCT2075-ACCT2181 and ABRE8363-ABRE8469). The NOV proteins are useful in manufacturing a medicament for treating a syndrome associated with a human disease. The NOV proteins and coding sequences may be used to diagnose, treat or prevent metabolic disorders such as diabetes or obesity, infections, cachexia, cancer, neurodegenerative disorders such as Alzheimer's disease or Parkinson's disease, immune disorders, haematopoietic disorders and various dyslipidaemias
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NOVX polypeptides and nucleic acids useful for diagnosing, preventing or

The present invention relates to novel human NOV proteins and their coding sequences (ACC72075-ACC72181 and ABR58363-ABR58469). The NOV proteins are useful in manufacturing a medicament for treating a syndrome associated with a human disease. The NOV proteins and coding sequences may be used to diagnose, treat or prevent metabolic disorders such as diabetes or obesity, infections, canceri, neurodegenerative disorders such as Alzheimer's disease or Parkinson's disease, immune disorders, haematopoletic disorders and various dyslipidaemias
 neuroprotective; dyslipidaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOVX polypeptides and nucleic acids useful for diagnosing, preventing treating NOVX-associated disorders, e.g. diabetes, obesity, cancer or dyslipidemia, and in chromosome mapping, tissue typing or

The present invention relates to novel human NOV proteins and their coding sequences (ACC72075-ACC72181 and ABRS8363-ABR58469). The NOV proteins are useful in manufacturing a medicament for treating a syndrome associated with a human disease. The NOV proteins and coding sequences may be used to diagnose, treat or prevent metabolic disorders such as diabetes or obesity, infections, cachexia, cancer, neurodegenerative disorders such as Alzheimer's diseasec or Parkinson's disease, immune disorders, haematopoietic disorders and various dyslipidaemias
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SECP, SECP-associated disorder; cancer; wound; AIDS; hepatitis; attained atteriocalerosis; psoriabis; autoimmune disease, crohn's disease; inflammatory disorder; anaemia; allergy; asthma; Grave's disease; multiple sclerosis; scleroderma; infection; diabetes; metabolic disorder; Addison's disease; cystic fibrosis; glycogen storage disease; Alzheimer's disease; parkinson's disease; addiction; cardiomyopathy; obesity; tissue typing; vaccine; human.
                                                      NOVX polypeptides and nucleic acids useful for diagnosing, preventing treating NOVX-associated disorders, e.g. diabetes, obesity, cancer or dyslipidemia, and in chromosome mapping, tissue typing or pharmacogenomics.
                                                                                                                                                                                                                                                                                                                                    Length 1588;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a new isolated SECP polypeptide. The SECP polypeptide, nucleic acid molecule or antibody is useful in the manufacture of a medicament for treating a syndrome associated with a human disease, the disease being selected from SECP-associated disorders. These are used in diagnosing, treating or preventing the SECP-associated disorders such as cancer, wounds, AIDS, hepatitis, arteriosclerosis, psoriasis, autoimmune diseases, Crohn's disease, inflammatory disorder, anaemia, allergy, asthma, Grave's disease, multiple sclerosis, caleroderma, infection, diabetes, metabolic disorder, Addison's disease, parkinson's disease, parkinson's disease, addiction, cardiomyopathy or obesity. The nucleic acids are further used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The collypeptides are also useful as vaccines. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SECP; SECP-associated disorder; cancer; wound; AIDS; hepatitis; attatiosclerosis; psoriasis; attoimmune disease; Crohn's disease; inflammatory disorder; anaemia; allergy; asthma; Grave's disease; multiple sclerosis; scleroderma; infection; diabetes; metabolic disorder; addison's disease; cystic fibrosis; glycogen storage disease; Altheimer's disease; Parkinson's disease; addiction; cardiomyopathy; obesity; tissue typing; vaccine; human.
                                                                                                                                                                                                               New SECP polypeptides and nucleic acids, useful for preventing or treating SECP-associated disorders, e.g. cancer, diabetes, asthma, AIDS or autoimmune diseases, and in chromosome mapping, tissue typing or pharmacogenomics.

The invention relates to a new isolated SECP polypeptide. The SECP polypeptide, nucleic acid molecule or antibody is useful in the manufacture of a medicament for treating a syndrome associated with a continuous of a medicament for treating a syndrome associated with a change are used in diagnosing, treating or preventing the SECP-associated disorders. These are used in diagnosing, treating or preventing the SECP-associated disorders such as cancer, wounds, AIDS, hepatitis, arteriosclerosis, psoriasis, autoimmune diseases, Croha's disease, inflammatory disorder, anaemia, allergy, asthma, Grave's disease, intliple sclerosis, coleroderma, infection, diabetes, metabolic disorder, Addison's disease, cystic fibrosis, glycogen storage disease, Albeimer's disease, acids are further used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The polypeptides are also useful as vaccines. The present sequence is used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ..
                                                                                                                                                                                                                                                                                                                                  The invention relates to human secreted polypeptides designated LP095, LP191, LP227, LP220, LP229, LP239 and mucleic acid molecules encoding such polypeptides. Novel secreted proteins of the invention are used for treating diseases such as atherosclerosis, Alzheimer's disease, diabetic retinopathy, psoriasis, pancreatitis, arteriosclerosis, rheumatoid arthritis, colorectal adenomas, severe combined immunodeficiency, isochemia, carcinomas, haemolytic anaemia, reperfusion injury, neoplasms and cancer especially liver cancer. They are also used for wound healing. Polymucleotides of the invention can be used to generate transgenic animals or knock out animals, which in turn, are useful in the development and screening of therapeutically useful reagents for use in the treatment of diseases associated with Lb polypeptide associated activity. They are also used in gene therapy. The present sequence is human LP217 secreted protein. LP217 gene is located
                                                                                                                                                                                                                                                                  Novel proteins and polynucleotides of secreted proteins useful for treating various diseases e.g. rheumatoid arthritis, cancer, psoriasis, diabetic retinopathy, arteriosclerosis, ischemia or reperfusion injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Recombinant; collagen-like polymer; CLP; tripeptide; helix; membrane; fibre; film; coating; triad sequence; collagen; mammalian; moulding; hydrogel; interchain linkage; colloid suspension.

These polymers have molecular weights of >30 kD and are able to form helices due to interchain linkages. These polymers pref. contain a proportion of tripeptide triad sequences found in natural collagens, pref. mammalian collagens. The CLPs impart unique characteristics to materials such as fibres, membranes, films, coatings, hydrogels, colloid suspensions and moulded articles. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                        This sequence represents a fragment of a unnatural collagen-like polymer of the invention. The products may be used as films, fibres, moulded objects and admixed with other natural or synthetic polymers or coatings on fibres, films, labware or other surfaces, e.g. prosthetic devices. The polymers may be used for binding a wide variety of specific binding materials, as catalytic substances (where the amino acid sequence may specifically chelate a wide variety of elements), as purification media, composites, laminates or adhesives. They may also be combined with inorganic or organic materials such as carbon fibres, nylon fibres, nitrocellulose, etc., as flask coatings or in synthetic matrices for the syrowth and study of cells, as affinity columns or as supports for biological materials. The polymers have collagen-like properties, but may be easily expressed in micro-organisms in high efficiency. The new
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              103P3E8; prostate; bladder; kidney; colon; lung; breast; rectum; stomach; tumour; cancer; cytostatic; gene therapy; antibody therapy; ribozyme; single chain monoclonal antibody; serum; blood; urine; tissue; human;

                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequences AAU71093-AAU71796 represent the 103P3E8-related protein and peptide fragments of the protein. 103P3E8 exhibits tissue specific expression in normal adult tissue, but it is also aberrantly expressed in many cancers including tumours of the prostate, bladder, kidney, colon, lung, breast, rectum and stomach. The 103P3E8 polynucleotide, its related
                               Sequences AAU71093-AAU71796 represent the 103P3E8-related protein and peptide fragments of the protein. 103P3E8 exhibits tissue specific expression in normal adult tissue, but it is also aberrantly expressed in many cancers including tumnours of the prostate, bladder, kidney, colon, lung, breast, rectum and stomach. The 103P3E8 polymucleotide, its related protein and peptide fragments and specific PCR primers are therefore useful for diagnosing and treating cancer. A vector comprising a polymucleotide which encodes a single chain monoclonal antibody, that immunospecifically binds to an 103P3E8-related protein, and a ribozyme capable of cleaving a polymucleotide having the 103P3E8 coding sequence, are both useful in the preparation of a composition for treating a pattient with a cancer that expresses 103P3EB. The sequences can be used in diagnostic methods to monitor the level of 103P3E8 gene products in serum, blood, urine and tissue and to thereby detect the presence of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequences AAU71093-AAU71796 represent the 103P3EB-related protein and peptide fragments of the protein. 103P3EB exhibits tissue specific expression in normal adult tissue, but it is also aberrantly expressed in many cancers including tumours of the prostate, bladder, kidney, colon, lung, breast, rectum and stomach. The 103P3EB polynucleotide, its related protein and peptide fragments and specific PGR primers are therefore useful for diagnosing and treating cancer. A vector comprising a polynucleotide which encodes a single chain monoclonal antibody, that immunospecifically binds to an 103P3EB-related protein, and a ribozyme capable of cleaving a polynucleotide having the 103P3EB coding sequence, are both useful in the preparation of a composition for treating a patient with a cancer that expresses 103P3EB. The sequences can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      103P3E8; prostate; bladder; kidney; colon; lung; breast; rectum; stomach; tumour; cancer; cytostatic; gene therapy; antibody therapy; ribozyme; single chain monoclonal antibody; serum; blood; urine; tissue; human; chromosome 9q13-q21.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Monitoring 103P3E8 gene products in sample from patient (suspected of) having cancer, useful for diagnosing, managing or treating cancers, e.g. prostate cancer, comprises determining presence of aberrant 103P3E8 gene
useful for diagnosing and treating cancer. A vector comprising a polynucleotide which encodes a single chain monoclonal antibody, that immunospecifically binds to an 103PBE8-related protein, and a ribozyme capable of cleaving a polynucleotide having the 103PBE8 coding sequence, are both useful in the preparation of a composition for treating a patient with a cancer that expresses 103PBE8. The sequences can be used in diagnostic methods to monitor the level of 103PBE8 gene products in serum, blood, urine and tissue and to thereby detect the presence of cancerous cells
                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Challita-Eid PM, Raitano AB, Mitchell SC, Afar DEH;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is that of a peptide fragment of human cytokeratin 8 (CK8), an antigen present on a variety of human cancers, including covarian, breast, lung, prostate, colon, kidney, thyroid, bone, upper digestive tract and pancreatic cancers. The invention provides antibodies that bind to CK8, but not to cytokeratin 18. A preferred antibody is mhoe -4, which is produced by a host cell deposited as ATCC Pra-3159, Antibody mhoe-4 preferentially binds to CK8 and to the CK8 peptides given in ABP72812-18 including the present peptide. The antibody may be linked to therefore agent, and a humanised mhoe-4 antibody is also claimed. The antibody is used in claimed methods of detecting the presence or absence of thyroid cancer cells, and for detecting the presence or absence of thyroid cancer cells, and for detecting the presence or absence of covarian, prostate, lung, colon, pancreas, breast and renal cancerous cells. A claimed method of inhibiting proliferation of cancerous cells comprises administering the antibody linked to a therapeutic agent, such

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptides AAR93205-9 are examples of peptides derived from the sequence of the Zona Pellucida protein ZP3 which contain the amino acid sequences AAR93210 or AAR93214-5. The peptides are esp. based on amino acids 23-30 of the ZP3 protein. The novel peptides can be used in vaccines to induce a humoral response against the ZP3 protein e.g. for contraception, esp. contain T cell epitopes. The novel peptides thus avoid potential ovarian damage caused by some peptides used as vaccines. The peptides used as vaccines. The peptides are also useful in assays for detecting autoimmune antibodies or for generating antibodies for passive immunisation
                                                                                                                                                                                                                                                                Zona pellucida; ZP3; vaccine; humoral response; contraception; epitope; pathogenic T cell response; ovary; assay; autoimmune; antibody; passive immunisation.
                                                                                                                                                                                                           New contraceptive peptide #5 derived from Zona Pellucida ZP3 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0

The present sequence represents a peptide derived from epithelial
neutrophil activating protein-78 (ERA-78). The present peptide stimulates
comparingenesis. The specification describes methods for inhibiting
angiogenesis or for inducing angiostasis, using chemokines (with a
conserved Cys Xaa Cys (CXC) sequence at the N-terminal) other than
comparing the factor of the not contain the amino acid sequence EIR.
The methods are useful for inhibiting tumour growth and metastasis and
for treating diseases such as haemangiomas, rheumatoid arthritis,
compared to the containt of the containt the same of the containt of the c

that comprises to an angiogenesis inhibited by administering to a human having a tumour, a composition comprising a recombinant adenovirus that comprises and expresses a nucleic acid segment that encodes a non-carried comprises and expresses a nucleic acid segment that encodes a non-carried comprises and expresses a nucleic acid segment that encodes a non-carried comprises and expresses a nucleic acid segment that encodes a non-carried comprises. Comprises the ELR sequence has been replaced with TVR or DLO. The method is for inhibiting angiogenesis. It is also useful for treating benign tumours, haemangiomas, rheumatoid arthritis, with TVR or DLO. The method is for inhibiting angiogenesis. It is also useful for treating benign tumours, haemangiomas, rheumatoid arthritis, comprehensions, meningioma, neovascular restenosis, arteriovenous malformations, meningioma, neovascular restenosis, arteriovenous comprehensis, idiopathic gullmonary fibrosis, BPH, (benign prostatic haemophilic joints, hypertrophic scars, oslerweber syndrome, pyogenic granuloma retrolental fibrophasia, solerweber syndrome, pyogenic granuloma retrolental fibrophasia, scleroderma, trachoma, vascular adhesions, synovitis, dermatitis, or endometriosis. It is also useful in companies the all properse of trial and error compleximentation and avoiding the expense of trial and error companies experimentation and avoiding the expense of trial and error companies. It inhibits or reduces angiogenesis in the animal or in a companient of the manner or angiogenesis stimulatory peptide derived from a CXC chamokina.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Inhibition of angiogenesis in human having tumor, by administering to human, composition comprising recombinant adenovirus having nucleic acid

                                                                                                                                                                                                           alpha chemokine agonist activity. It can be used for the treatment of, e.g. viral, bacterial, fungal, yeast or parasitic infections, arthritis, leukaemia or solid tumours including primary and metastatic disease. The peptide can also be used as a protective agent for the immune system during chemotherapy and radiation-therapy. In contrast to the claimed invention in W09311159, which describes a 77 residue amino acid interleukin-8 antagonist, the present peptide is more efficiently prepd. (solid phase synthesis) and has a more rapid and extensive tissue
                                                                                                                                                                                     The present peptide is an alpha chemokine derived peptide analogue, with
New human interleukin-8 peptide analogues - useful as agonists or antagonists for alpha chemokines for treating e.g. neoplasms, infection and auto-immune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                .;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 5; DB 2; Lengtn 10, Pred.                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to a novel polypeptide encoded by an alternative reading frame of a pathogenic virus, where the polypeptide starts with a methionine amino acid residue, which comprises an antigenic determinant and more than 7 amino acid residues. The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present sequence is that of a hepatitis C virus peptide of the invention.
                                                                                                                                                                                                                                                                                                                    New polypeptide encoded by an alternative reading frame of a pathogenic virus comprising an antigenic determinant, useful for treating or preventing an infection with the pathogenic virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antimicrobial, platelet microbiocidal protein, PMP-1, PMP-2, bacterial infection, fungal infection; fungicide; disinfectant, preservative, foods, cosmetic, multiple antibiotic resistance, rabbit,

The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acid core sequence (derived from 150 amino acid sorts and PMP-2, platelet microbiolal protein), and retromers.

PMP-1 and PMP-2, platelet microbiolal protein), and retromers.

Crominations, extensions, combinations, fusions and their derivatives. The truncations extensions are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fusions; and (2) artimicrobial peptides for potentiating antimicrobial adents, combinations and funginity of antimicrobial peptides are useful as individual antimicrobial agents to restoriate and fungi, agents in combination with other antimicrobial peptides are useful as individual antimicrobial agents that enhance, potentiate or restore efficacy of conventional antimicrobials, agents to improve efficiency of molecular conventions of leukocytes, as disinfectants or preservatives for use in foods and cosmetics and as agents to improve efficiency of molecular conventions of leukocytes, as disinfectants or preservatives for use in foods and cosmetics and as agents to improve efficiency of molecular considered to have undesirable toxicity, immunogenicity and short are based upon natural antimicrobial peptides of prior art have generally become problems of toxicity, immunogenicity, and short are based upon natural antimicrobial peptides contained antibicit lower inherent mammalian cell toxicits and as agents considered to brokers and inherent mammalian cell toxicity and and covercome problems of toxicity, immunogenicity, and shortnass of duration of effectiveness due to biodegradation, retaining activity in plasma and as gerum. The present sequence is a rabbit pwe based antimicrobial peptid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antimicrobial; platelet microbiocidal protein; PMP-1; PMP-2; bacterial infection; fungal infection; fungicide; disinfectant; preservative; foods; cosmetic; multiple antibiotic resistance; rabbit;

The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-
150 amino acids containing a 7-13 amino acid core sequence (derived from PMP-1 and PMP-2, platelet microbiocidal protein), and retromers,

truncations, extensions, combinations, funions and their derivatives. The possible structures are fully described in the specification. Also included are (1) an antimicrobial agents active against organisms such as bacteria and fungi comprising a peptide of 13-74 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations of the peptides described above, antimicrobial peptides for potentiating antimicrobial activity of antimicrobial peptides are useful as individual activity of antimicrobial peptides are useful as individual antimicrobial agents that enhance the entimicrobial agents that enhance, potentiate or restore efficacy of conventional antimicrobials, agents that enhance the antimicrobial conventions of leukocytes, as disinfectants or preservatives for use in conventional antimicrobials, agents to improve efficiency of molecular conventions of leukocytes, as disinfectants or preservatives for use in biology techniques. Antimicrobial peptides of prior art have generally benchmarked to have undesirable toxicity, immunogenicity and short are based upon natural antimicrobial peptides that have persent invention are based upon natural antimicrobial peptides that have persent invention sepectrum activity against pathogens exhibiting multiple antibicic resistance. They exhibit lower inherent mammalian cell toxicity, immunogenicity, and shortness of duration of effectiveness due to biodegradation, retaining activity in plasma and covercome problems of toxicity, immunogenicity, and shortness of duration of serum. The present sequence is a rabbit pMP based antimicrobial peptides.
                                                                                                                                                                                                                                                                                                                                                                                           New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting
                                                                                                                                                                                                                                              (HARB-) HARBOR-UCLA RES & EDUCATION INST.

                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a method of inhibiting cancerous growth of a cell, comprising contacting the cell with at least one antibody, or its antigan-binding portion, where the antibody or antigen-binding portion binds to an epitope located within residues 200-400 of EphB4, which consists of the sequence of 984 amino acids (S1) fully defined in the specification, or to an epitope located in a sequence at least 854 composition and methods are useful for treating or preventing cancer (e.g. breast or prostate cancer) or for identifying agents that inhibit cancer cancerous growth of a cell. The current sequence represents an EphB4 blocking peptide used in an example from the invention in EphB4 epitope
                                                                                                                                                                                                                                                                                           Inhibiting cancerous growth of a cell by contacting the cell with an antibody, or its antigen-binding portion, that binds to an epitope of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

disease, Down's syndrome, myotonic dystrophy, Huntington's disease,

disease, Down's syndrome, myotonic dystrophy, Huntington's disease,

multiple sclerosis, alcoholic liver disease, diabetes mellitus type II

and many others listed) or susceptibility to these disorders. The method

at an early stage. It is based on the observation that disease may be

caused by mutations in RNA rather than DNA. The invention describes the

cused of neuronal system RNA molecules, specifically proteins including

beta-amyloid precursor protein (beta-APP), the microtubule associated

proteins Tau and Big Tau, ubiquitin B, apolipoprotein B, microtubule

associated protein 2 (MAP2), neurofilament-L, neurofilament-M,

created protein 2 (MAP2), neurofilament-L, neurofilament-C,

protein (GrAP), the cellular tumour antigen p53, B-cell leukemial/ymphoma

2 (bcl-2) proto-oncogene, semaphorin III, HUPF-1, high mobility group
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             0

                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes a novel method for the diagnosis of a disease caused by, or associated with, an RNA molecule that has a frameshift mutation. The method is used to diagnose age-related diseases, especially cancer and a wide range of neurodegenerative disorders (e.g. Alzheimer's
                                                                                                                                                                                                                                                                                                                                corresponding protein mutations - used to diagnose cancer and neurological diseases, particularly Alzheimer's disease, and also for treatment and prevention with specific ribozymes or wild-type RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .

The specification describes human secreted proteins. The polynucleotides and their corresponding secreted polypeptides are useful for preventing, treating or amelicating medical conditions, e.g. by protein or gene amount of amelicating medical conditions can also be diagnosed by determining the amount of the polypeptides in a sample or by determining the presence of mutations in the polymerications can also be diagnosed by determining the presence of the polyucleotides, based on which tissues are described for each of expressed in, and include developing products for the diagnosis or treatment of cancer, tumours, neurodegenerative disorders, developmental abnormalities and fetal deficiencies, blood disorders, leukemias, diseases of the immune system, autoimmune diseases, hepatic and renal disease, lymphomas, inflammation, allergies, ischemic shock, Alzheimer's disorders involving osteoclasts such as seteoporosis, arthritis or
                                                                                                                                                                                                                                                                                                                                                                                                 sen CA, Ruben SM, Ni J', Wei Y, Soppet DR, Moore PA;

The invention relates to an antimicrobial peptide composition for use against organisms such as bacteria and fungi comprising a peptide of 5-150 amino acids containing a 7-13 amino acid core sequence (derived from 150 mino acids containing a 7-13 amino acid core sequence (derived from probable structures are fully described in the specification. Also included are (1) an antimicrobial peptide composition for direct activity or for potentiating antimicrobial peptide composition for direct activity or for potentiating antimicrobial agents active against organisms such as bacteria and fungi comprising a peptide of 13-7 containing an amino acid core sequence selected from truncations of the peptides described above, and retromers, extensions, combinations and fusions; and (2) antimicrobial peptides for potentiating antimicrobial activity of antimicrobial peptides are useful as individual antimicrobial agents.

CC antimicrobial peptides are useful as individual antimicrobial agents.

CC antimicrobial peptides are useful as individual antimicrobial agents (2) antimicrobial peptides are useful as individual antimicrobial agents.

CC conventional attimicrobials, agents the enhance the antimicrobial agents (2) conventional attimicrobials, agents to improve efficiency of conventional attimicrobials, agents to improve efficiency of molecular of foods and consentics and as agents to improve efficiency of molecular of foods and consentions and as and as agents to improve efficiency of molecular of those motorial attimicrobial peptides of prior art have generally become problems of toxicity, immunogenicity, and short are based upon natural attimicrobial peptides that have potent and broad spectrum activity against pathogens exhibiting multiple antibiotic considered to broadegradation, retaining activity in plasma and constitutes due to biodegradation, retaining activity in plasma and constitutes are arabbit pymp based antimicrobial peptides are arabbit pym based antimicrobial peptides are arabbit pym based antimicrobial antim
                                                                                                                                                                                                                                                                   New antimicrobial peptide composition for the prevention and treatment of infections caused by organisms, such as bacteria and fungi, exhibiting multiple antibiotic resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0; Indels

                                                                                                                                                                                                                                                                                                     Non-infective cell-requiring method of searching for hepatitis D remedies in a system containing e.g. polypeptide binding to RNA polymerase II with measuring of binding level for indication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                for
                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a method for searching hepatitis D remedies. The method comprises adding a test compound to a system containing e.g. a hepatitis D virus antigen (HDV antigen) and RNA polymerase II, measuring the binding level of HDV antigen binding to RNA polymerase II, and comparing with a control for selection of a compound inhibiting the binding. The method is for screening remedies for hepatitis D including for hepatitis virus D accompanying hepatitis B, such as gene expression promoters applicable in regeneration medicine for treating organs or tissues. The present sequence is a HDV antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The present invention relates to a method for searching hepatitis D remedies. The method comprises adding a test compound to a system containing e.g. a hepatitis D virus antigen (HDV antigen) and RNA polymerase II, measuring the binding level of HDV antigen binding to Polymerase II, and comparing with a control for selection of a compound inhibiting the binding. The method is for screening remedies for hepatitis D including for hepatitis virus D accompanying hepatitis B, such as gene expression promoters applicable in regeneration medicine for treating organs or tissues. The present sequence is a HDV antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
Non-infective cell-requiring method of searching for hepatitis D remedies in a system containing e.g. polypeptide binding to RNA polymerase II with measuring of binding level for indication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Targeting vector Tg-2/Not containing PGK-neomycin-resistant gene protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  no
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gene-deleted animal e.g. mouse - useful for screening therapeutic agents for diseases such as blood vessel inflammation and nephritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a protein from a targeting vector Tg-2/Not containing a PGK-neomycin-resistant gene, from the present invention. The targeting vector is used in an example of the present invention for producing a gene-deleted animal e.g. a mouse comprising gene to encode nucleobindin in which all or part of nucleobindin gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              adenocarcinoma, mammary adenocarcinoma, lung adenocarcinoma, pancreatic adenocarcinoma or non-seminomal testis carcinoma. The invention is also useful for preparing a medicament for treating or preventing cancer in a mammal. The present sequence is human cytokeratin KB protein fragment
deleted or replaced by another gene. The mouse can be used for screening therapeutic agents against diseases such as blood vessel inflammation and nephritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention provides a cancer-associated epitope comprising two separate polypeptides, a cytokeratin 8 polypeptide and a cytokeratin 18 polypeptide. Vaccine composition of the invention is useful for treating or preventing colon adenocarcinoma, ovarian adenocarcinoma, renal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel isolated cancer-associated epitope comprising two separate polypeptides, a cytokeratin 8 polypeptide and a cytokeratin 18 polypeptide, useful as component of vaccine for preventing or treating
                                                                                                              Gaps

The polymuclectide sequences given in AAG74223-C74279 encode the human secreted proteins represented in AAB39179-B39226. Sequences AAB39227-B39308 are alternative proteins encoded by the genes, and also protein bave activities sequences with which they share homology. The proteins have activities based on the tissues and cells in which they are expressed. Examples of activities include: immunosuppressive; antiarthritic; antirhematic; antiporliferative; cytostatic; cardiant; vasotropic; antiporliferative; cytostatic; cardiant; vasotropic; encoprotective; concurpic; neuroprotective; antibacterial; vinucide; fungicide; and contropic; neuroprotective; antibacterial; vinucide; fungicide; and contropic; neuroprotective; antibacterial; vinucide; fungicide; and contropic; neuroprotective; antibacterial; vinucide; fungicide; and squalsts of the invention may be useful in the treatment, prevention, and/or diagnosis of various disease, disorders and conditions such as autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, bacterial, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to regenerate tissues, additive or preservative e.g. to increase storage capabilities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to human single exon nucleic acid probes (SENP: see AA110068-AA128459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, noctably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              numman genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
                                                                                                                                 Peptide #7576 encoded by probe for measuring cervical gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptide #1843 encoded by probe for measuring cervical gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPS are derived from human HeLea cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Claim 27;

gene

Penn SG,

```
The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human placenta.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to single exon nucleic acid probes (SENP: see AA13115-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              for measuring placental gene expression.

                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 6
                                                                                                                                                                                                                                                                                                                 The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human genome-derived single exon nucleic acid probes useful for analyzing

The first probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from meNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents at ar greater diversity of probes for measuring gene expression, with far less bias than expressed sequence taggene expression, with far less bias than expressed sequence is a peptide microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence is a feptive the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                            New spatially-addressable set of single exon nucleic acid probes, useful for measuring gene expression in sample derived from human breast, comprises number of single exon nucleic acid probes.
                                    Human; microarray; single exon probe; gene expression; breast; disease;
   Peptide #1902 encoded by breast cell single exon nucleic acid probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a spatially-addressable set of single exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 27; SEQ ID NO 12219; 327pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                     Peptide #11384 encoded by probe for measuring placental gene expression.

                                                                                                                                                                                   The present invention relates to the isolation of novel human respiratory antigens, and cDNA (AAS27869-AAS28159) and genomic sequences encoding for these polypeptides. The sequences of the invention are useful for preparatory system including throat disorders (e.g. vocal cord paralysis, tospiratory system including throat disorders (e.g. vocal cord paralysis, tospiratory system including throat disorders e.g. pneumonia, allergic disorders e.g. asthma, pleurisy, cystic fibrosis, emphysema, nose disorders and cancers of the respiratory tissues e.g. lung cancer. The polymucleotide sequences of the invention are useful in gene therapy and antisense therapy. AAUT/685-AAUT/975 represent novel human respiratory antigens. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                       Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the respiratory system including respiratory cancers and also for testing and detection e.g. diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Protein #1825 encoded by probe for measuring heart cell gene expression.

The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart (see ABA21535-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenical heart disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human genome-derived single exon nucleic acid probes useful for analyzing

The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimar's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                          ö
   The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                         Human brain expressed single exon probe encoded protein SEQ ID NO: 36494.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; brain expressed exon; gene expression analysis; probe; microarray; Alzheimer's disease; multiple sclerosis; schizophrenia; epilepsy; cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                           Gaps

The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nuclecitds sequences given in the specification (or complements) fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG59300 represent human colliboration for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human adult liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The present invention relates to novel single exon nucleic acid probes (see AA100010-AA110067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult bliver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG5930 represent human liver single exon encoded peptides of the invention. Note: The sequence but was obtained in electronic format disrectly from WIPO at fitp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

                                                                              à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a spatially-addressable set or shall man uncleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of from human lung comprising the proper shall be acid probes having one of from human lung comprising the novel set of probes of probes which hybridise at high stringency to a nucleic probes. Also included are a microarray comprising the novel set of probes in the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample carived from human lung; measuring gene expression in a sample carived from human lung; comprising (a) contacting the array with a collection of detectably lound to each probe of the array; identifying exons in a the act one expression of detectably predicting at least one exon from genomic sequences of the array; identifying exons in a the array identifying exons in a the predicted exon, the probe is included a raray; identifying exons in a the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single exon probe, the entering (b) detecting specific hybridisation of detectably labeled nucleic acids from eukaryote lung mRNA, to a single exon probe in the above mentioned microarray; assigning exons to a single exon probe of the exons in interting (a) identifying exons from genemic sequence by the method above and (b) measuring the expression of each of the exons in the tissues and/or cell types undicates that the above and (b) measuring the expression of each of the exons in the tissues and/or cell types undicates that expression of the exons in the tissues and/or cell types undicates that the probes/open reading frames (GRP). The probes are used for gene expression of the exons in the study of lung diseases such as asthma, lung derived mRNA and for the study of lung diseases (ILD), familial idiopathic pulmonary displace, probes/open reading frames (GRP). The probes/prop
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Spatially-addressable set of single exon nucleic acid probes, used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a spatially-addressable set of single exon
            dyskinesis; pulmonary hypertension;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          measure gene expression in human lung samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 27; SEQ ID NO 35887; 634pp; English

the interiest of probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 oper reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung, measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acids derived from human lung carray; identifying exons in a evaryotic genome, comprising (a) array; identifying exons in a evaryotic genome, comprising (b) the evaryotic and (b) detecting specific hybridisation of detectably the labeled nucleic acids from entaryote lung mRNA, to a single exon probe, having a fragment identical to the predicted exon, the probe is included comprising (a) identifying exons from exaryots exons to a single gene, comprising (a) identifying exons from genomic sequence by the method above mentioned microarray; assigning exons to a single gene, comprising (a) identifying exons from genomic sequence by the method above mat (b) measuring the expression of each of the exons in several
                                                                                                                                                                                                                                                             Human peptide encoded by genome-derived single exon probe SEQ ID 26857.
                                                                                                                                                                                                                                                                                                                                                                                     Hermansky-Pudlak syndrome; sarcoldosis; pulmonary haemosiderosis; pulmonary histiocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; pulmonary ciliary dyskinesis; pulmonary hypertension; hyaline membrane disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Spatially-addressable set of single exon nucleic acid probes, used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a spatially-addressable set of single exon
                                                                                                                                                                                                                                                                                                       Human; single exon probe; asthma; lung cancer; COPD; ILD; chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; tuberous sclerosis; Gaucher's disease; Niemann-Pick disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       measure gene expression in human lung samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 27; SEQ ID NO 26857; 634pp; English.

tissues and/or cell types using hybridisation to a single exon
microarrays having a probe with the exon, where a common pattern of
expression of the exons in the tissues and/or cell types indicates that
the exons should be assigned to a single que; a peptide comprising one
of 12011 sequences, mentioned in the specification, or encoded by the
probes/open reading frames (ORF). The probes are used for gene expression
analysis, and for identifying exons in a gene, particularly using human
lung derived mRNA and for the study of lung diseases such as asthma, lung
cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
bullak syndrome, sarcoidosis, pulmonary alwoolar proteinosis,
faragener syndrome, fibrocystic pulmonary daysplasia, primary ciliary
dyskinesis, pulmonary hypertension and hyaline membrane disease. The
present sequence is a peptide/protein encoded by a single exon probe of
the invention. Note: The sequence data for this patent did not form part
of the printed specification, but was obtained in electronic format
directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

              a subject which involves determining the presence or absence of mutation in (II) or determining the presence or amount of expression of (I) in a biological sample and diagnosing a pathological condition based on the persult. The human respiratory system associated polymocleotides, the polypeptides encoded by them, and antibodies that immunospecifically bind these polypeptides are useful in diagnosis, treatment, prevention and/or prognosis of disorders of respiratory system such as throat disorders (e.g., vocal cord paralysis, tonsillitis, and laryngitis), lung disorders (e.g., pneumonia), allergic disorders, (e.g., asthma and eosinophilic pneumonia), pleurisy, cystic fibrosis, emphysema, histiocytosis, sarcoidosis, nose disorders (thinis and sinusitis), neoplasms and/or cancers of respiratory tissues (e.g., throat cancer, lung cancer, and cancer of the nose). The polynucleotides are useful in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human footal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences

Sequence 47 AA;

The invention describes an isolated polypeptide (I) comprising an amino acid sequence that is at least 90% identical to polypeptide fragment of any one of 299 respiratory system antigen sequences (F8) and having biological activity, polypeptide domain or epitope of PS, full-length protein of PS, or variant, allelic variant or species homolog of PS. (I) or a polynucleotide (II) encoding (I) is also useful for diagnosing a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human genome-derived single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders
                                                                                                                                                                                                                               Peptide #5617 encoded by probe for measuring placental gene expression.
